

Erfan Banaei

Flutter Developer 3 years

[View My Portfolio](#)

I have 6 years of experience in web and mobile development, with over 3 years of professional experience specifically in Flutter. My goal is to develop mobile applications using Flutter based on software engineering principles, proper architecture, and efficient state management. My main focus is on code quality, performance optimization, API integration, and building a structure that makes application development, testing, and long-term maintenance easier.

Work History

 Parse Holding oct 2025-Present

sijaam

- Contributed to the development of **Sijaam**, a platform for organizational management and corporate service procurement.
- Developed a **modular and scalable UI** with smooth and intuitive user experience for managers.
- Implemented core features including **service request submission, process management, and user interactions**.
- Integrated with backend APIs and managed data using **Dio** following maintainable architecture practices.
- Utilized **GetX** for state management, routing, and dependency injection.
- Built complex forms with validation using **flutter_form_builder**.
- Managed secure user data with **Flutter Secure Storage** and **SharedPreferences**.
- Added **Persian calendar and Jalali date** support using Shamsi Date and Persian DatePicker.
- Optimized performance, fixed bugs, and improved overall system **stability**.
- Collaborated closely with product and backend teams to implement organizational requirements accurately.

Panel Admin Sijaam

- Developed the **Sijaam Admin Panel** for web and Windows with a clean, responsive UI.
- Built **dashboards and management tools** to optimize organizational operations.
- Integrated with backend APIs and ensured **maintainable, scalable code**.
- Collaborated with the mobile team to **synchronize features across platforms**.

Freelance Oct 2021-Present

 Hoshyarmali

- Smart assistant for financial management and calculations, including loan calculation and comparison, investment returns, gold valuation, and inflation analysis.
- Complete UI/UX design was done by myself, and the project was implemented using Clean Architecture.
- Backend developed with PHP, and the admin panel is implemented using WordPress.
- Available on Android and Web.
